

OpenTSx

Architecture Overview

Architecture overview...

Architecture: Identify Patterns & Buildingblocks

3 typical flow patterns:

(1) Linear flow ...

(2) Bi-directional flow ...

(3) Complex process flows ...

3 typical flow patterns:

(1) Linear flow ...

(2) Bi-directional flow ...

(3) Complex process flows ...

Easy:

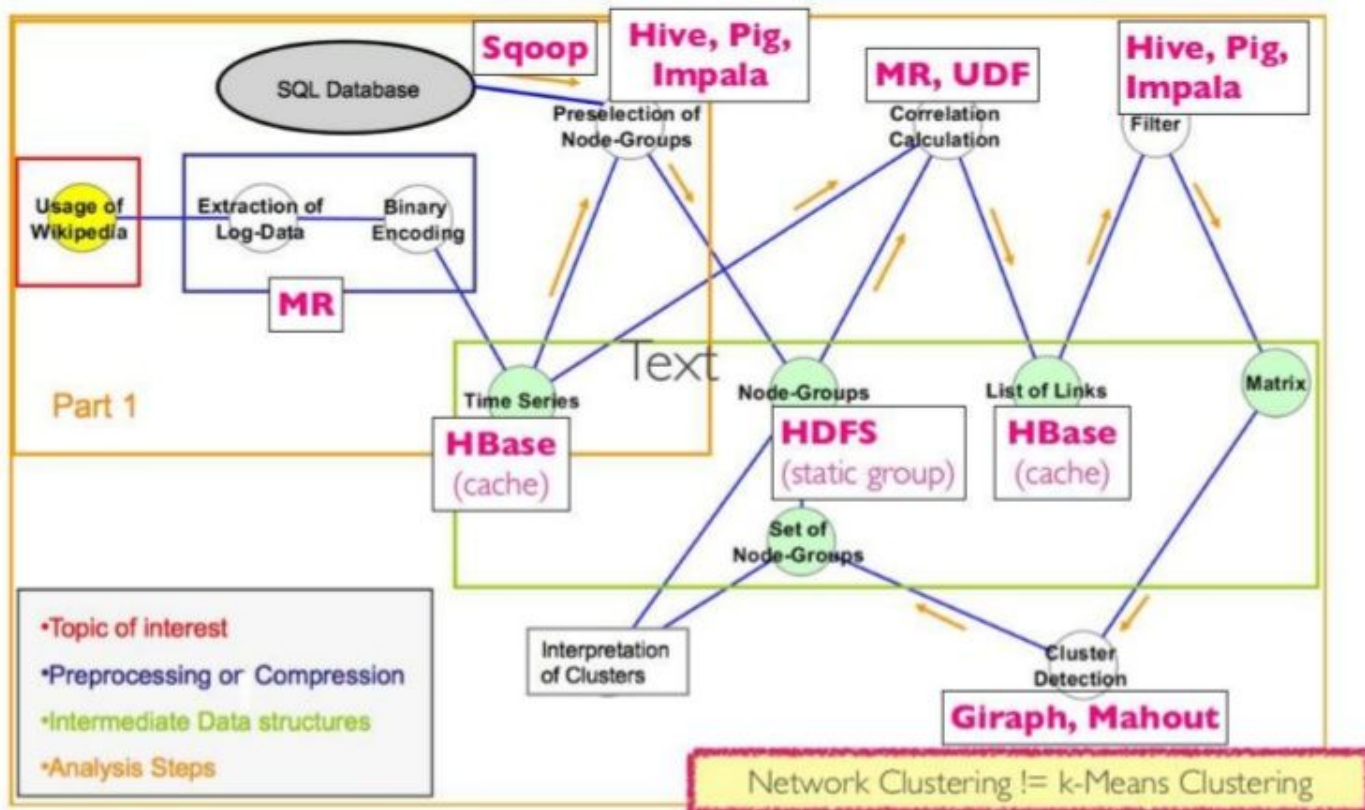

1. reusable
2. scalable
3. ready to use
4. ready to improve

⇒ Target for simplification ...

A Standardized Processing Procedure for Episodes used for social media analysis on Hadoop:

- The predecessor of **OpenTSx** is **Hadoop.TS**
(https://www.researchgate.net/publication/269687614_Hadoop_TS_Large-Scale_Time-Series_Processing)
- Hadoop.TS used a variety of Hadoop ecosystem projects
(Sqoop, Flume, Hive, Spark, Yarn, HDFS, Solr, HBase, Impala, Mahout, Giraph)
- Managing the data flow at scale was **possible**, but complex.

OVERVIEW - DATA FLOW

This example illustrate the variety
of interconnected components from our
previous implementation using the Hadoop ecosystem.

The resulting complexity of a solution can become a blocker!

Architects have to simplify ...

... and the Kafka Ecosystem helps you on this journey!

KEEP
CALM
AND

Simplify

Building Blocks:

Data flows are no longer transient.
The event log acts as single source of truth.

*Paradigm Shift in
Data Management*

Building Blocks:

Domain specific logic is implemented in small reusable components:

Domain Driven Design

Data flows are no longer transient.
The event log acts as single source of truth.

*Paradigm Shift in
Data Management*

Building Blocks:

Domain specific logic is implemented in small reusable components:

Domain Driven Design

Source Connectors
Integrate input side ...

Legacy and Future Systems

Data flows are no longer transient.
The event log acts as single source of truth.

Paradigm Shift in Data Management

Building Blocks:

Domain specific logic is implemented in small reusable components:

Domain Driven Design

Source Connectors integrate sources ...

Legacy and Future Systems

Data flows are no longer transient.
The event log acts as single source of truth.

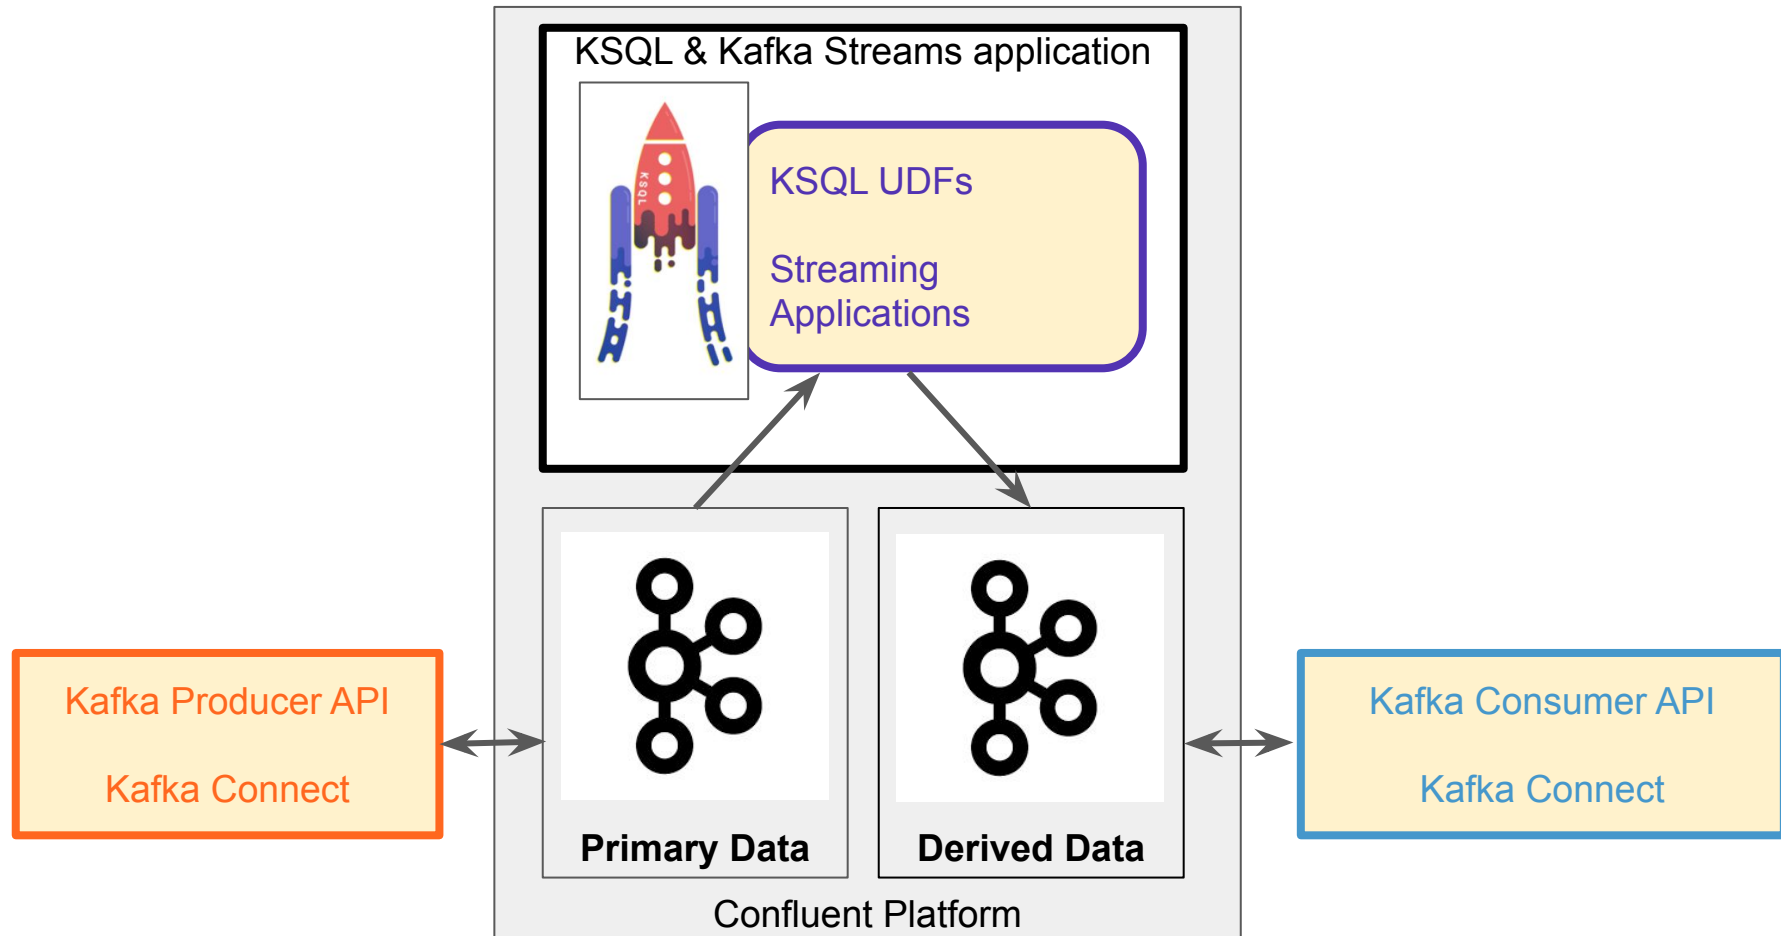

Paradigm Shift in Data Management

Sink Connectors integrate external targets ...

Special Purpose Systems

Confluent Platform for Time Series Processing

THANK YOU !!!
